AUBER

Association for University Business
and Economic Research

(The professional association of business and economic research organizations in American public and private universities.)

HISTORY

Organizational steps toward the establishment of the Association were taken at the January, 1947, meeting of the American Statistical Association, American Economic Association, and related associations held in Atlantic City, New Jersey. The first annual meeting was in October, 1947, at the Willard Hotel, Washington, D.C.

Since its organization in 1947, AUBER has expanded to include more than 100 Full and Associate members representing colleges and universities in nearly every state of the nation, as well as in several other countries.

OBJECTIVES

To further basic and applied research in business and economics.

To provide a means by which problems common to business and economic research in American universities and other member organizations can be discussed and clarified.

To provide a mechanism for the joint consideration of problems of research methodology and the availability of information.

To provide a medium through which information and opinions on problems emerging in business and economic research can be expeditiously exchanged.

To provide for annual meetings of the Association for the discussion of all those problems typically faced by the membership, both with respect to the subject matter of their research and with respect to their problems of internal operation.

MEMBERSHIP

AUBER welcomes applications for full or associate membership from any organized bureau, institute, division, or center devoted to economic and/or business research, which is an integral part of a university or college. Institutional memberships are also available for other organizations which meet the appropriate criteria.

PREFACE

This *Bibliography* provides convenient reference to publications of the Association for University Business and Economic Research (AUBER) and the members of the American Assembly of Collegiate Schools of Business (AACSB) which do not appear in the traditional indexes. Simultaneously, it brings together in one document a wealth of related topics of interest to researchers in business and economics.

Users will note that many of the publications deal with topics beyond the narrowly construed confines of business and economics, mainly because university schools of business and economics and their research organizations are concerned with a multitude of issues and problems facing our society. Through their books, monographs, periodicals, working papers, bulletins, and other publications, these organizations are making available the results of research encompassing both theoretical and applied aspects of the problems which in one way or another touch on the disciplines of business and economics. This volume, which lists over 2500 publications produced by 128 research units, gives some indication of the increased scope of activity and research being conducted by AUBER and AACSB research organizations.

As with previous editions of the *Bibliography,* there are three main parts to this book. The first of these is a listing of Publications by Subject, with items categorized according to the classification system set forth on p. 3, and listed alphabetically by title. The second section, Publications by Institution, lists works alphabetically also, under their institute of origin. Note than an exception is made to the alphabetical format for titles beginning with a numeral. All such titles are placed at the end of each listing, both by subject and institution. The third section is the Author Index, where the publications are referenced to individual authors by the index numbers previously assigned in the section on Publications by Institution.

This volume makes use of a fairly extensive subject cross-reference system in Section I. Many of the subject categories are interrelated, making a single classification of a publication difficult and somewhat arbitrary. We hope that having references to related categories will facilitate the researcher's efforts.

Requests for the publications listed in the *Bibliography* should be directed to the publishers. Addresses for all AUBER members and AACSB schools whose material is listed in this edition will be found immediately following their names in Section II, Publications by Institution.

Requests for back issues of the *Bibliography* should be directed to the West Virginia University Bureau of Business Research. A convenient order form is provided in the back of this issue.

ACKNOWLEDGMENTS

As with past editions, we would like to express our appreciation to the American Economic Association for permission to use their subject classification system, and to Mark and Naomi Perlman, of the *Journal of Economic Literature,* who made the necessary arrangements for its use.

A special note of thanks is due everyone who aided in the actual production of the *Bibliography,* including Deanna Jefferson, who exhibited the utmost proficiency at word processing; Eileen Tavaglione, whose expertise facilitated the running of the computer programs; and R. W. Kuznicki, who served as a computer consultant again this year. We wish also to thank our student assistants, Theresa Rippole and Dave Hall, who helped with the mailing of the questionnaires, proofreading, and other tasks.

Finally, an expression of gratitude is once again extended to all members of AUBER and AACSB for their cooperation in supplying the information on their publications for 1980. Without their carefully prepared responses to our questionnaires, there would be no *Bibliography.* Since participation in this annual effort is voluntary, items listed last year may not appear this year. Conversely, other publications may appear for the first time in this volume.
